Date Created	21-Jul-2026

Prepared By Business Analysis Team

1.1 Version History

Date 21 July 2026

Version	Date	Author	Description
0.1	10-Jul-2026	Business Analyst	Initial draft outline
0.5	15-Jul-2026	Business Analyst	Added functional & data requirements
1.0	21-Jul-2026	Business Analyst	Finalized for review; test-ready version

1.2 Distribution List

Name / Role	Department	Purpose
HR Process Owner	Human Resources	Requirement validation & sign-off
Product Owner	HRM Product Team	Scope approval
QA Lead	Quality Assurance	Test case & UAT design
Development Lead	Engineering	Technical feasibility & estimation

2. Introduction

2.1 Purpose

This Business Requirements Document (BRD) defines the business and functional requirements for the **Employee Registration function** within the Human Resource Management (HRM) system. It describes how a new employee record is created, validated, stored, and approved in the system, and provides the data structure, business rules, and acceptance criteria needed by the design, development, and testing teams to build and validate the feature.

2.2 Background

The organization currently onboards employees using a mix of paper forms and spreadsheets, which leads to duplicate records, inconsistent data quality, delays in payroll and access provisioning, and difficulty in reporting. The Employee Registration module will provide a single, validated entry point for creating employee master data that is used across Payroll, Attendance, Leave, Performance, and Access Management modules.

2.3 Business Objectives

- Provide a single, standardized digital entry point for onboarding new employees.
- Reduce data entry errors through field-level validation and mandatory-field enforcement.
- Enable each employee record to be traced back to an approver and an audit trail.
- Eliminate duplicate employee records via unique-identifier checks (CNIC / National ID, email).
- Reduce average onboarding data-entry time from 45 minutes (manual) to under 10 minutes (system).
- Provide downstream modules (Payroll, Attendance, Leave) with clean, complete employee master data.

2.4 Scope

In Scope	Out of Scope
Creation of new employee record (personal, job, contact, statutory data)	Bulk import of historical/legacy employee data (handled in a separate migration BRD)
Field-level and cross-field validation rules	Payroll salary structure configuration
Document upload (CNIC, photo, resume, certificates)	Performance appraisal workflow
Multi-step approval workflow (HR Executive → HR Manager)	Employee self-service portal (phase 2)
Auto-generation of unique Employee ID	Biometric / access-card hardware integration
Email/SMS notification on registration and approval	Third-party background-verification integration (phase 2)

3. Stakeholders

Stakeholder	Role	Interest / Responsibility
HR Executive	End User	Enters and submits new employee registration data
HR Manager	Approver	Reviews and approves/rejects submitted registrations
IT / Payroll Admin	Downstream Consumer	Uses approved employee data for payroll & system access
Employee (New Hire)	Data Subject	Provides personal information and documents
Product Owner	Business Sponsor	Owns feature scope and prioritization
QA / Test Team	Validation	Verifies the feature against this BRD
Compliance Officer	Governance	Ensures data-privacy and statutory compliance

4. Assumptions, Constraints & Dependencies

Assumptions

- Each employee has a unique national identity number (CNIC/Passport) usable as a de-duplication key.
- Department, Designation, and Branch/Location master lists already exist in the system.
- Users accessing the module are authenticated HR-role users with appropriate permissions.

Constraints

- The system must comply with organizational data-retention and privacy policy.
- Registration must work on desktop browsers (Chrome, Edge, Firefox – latest 2 versions).
- Document upload size limited to 5 MB per file; accepted formats PDF, JPG, PNG.

Dependencies

- Department/Designation/Branch master data module.
- Notification service (email/SMS gateway) for approval alerts.
- Document storage service for uploaded employee documents.

5. Functional Requirements

The table below lists the functional requirements for the Employee Registration function. Each requirement has a unique ID for traceability into design, development, and test cases.

ID	Requirement	Description	Priority
FR-01	Add Employee	The system shall allow an authorized HR user to create a new employee record by entering personal, contact, job, and statutory details.	High
FR-02	Mandatory Field Validation	The system shall enforce all mandatory fields (see Data Dictionary, Section 7) before allowing submission.	High
FR-03	Duplicate Check	The system shall validate the CNIC/National ID and Email Address against existing records and block submission on a duplicate match, displaying an error message.	High
FR-04	Auto-generate Employee ID	The system shall auto-generate a unique, sequential Employee ID (format EMP-YYYY-NNNNN) upon successful save.	High
FR-05	Document Upload	The system shall allow upload of CNIC copy, photograph, resume, and educational/experience certificates, each up to 5 MB (PDF/JPG/PNG only).	Medium
FR-06	Draft Save	The system shall allow the user to save an incomplete registration as a draft and resume it later.	Medium
FR-07	Approval Workflow	The system shall route a submitted registration to the HR Manager for approval; the record status shall move to 'Active' only after approval.	High
FR-08	Rejection & Correction	The system shall allow the HR Manager to reject a registration with a mandatory reason/comment, returning it to the submitter for correction.	High
FR-09	Notification	The system shall send an email/SMS notification to the HR Executive and new employee at each status change (Submitted, Approved, Rejected).	Medium
FR-10	Audit Trail	The system shall log the user, timestamp, and action for every create, update, approve, and reject event on an employee record.	High
FR-11	Search & View	The system shall allow authorized users to search and view employee registration records by Employee ID, Name, CNIC, or Department.	Medium
FR-12	Edit Active Record	The system shall allow HR users with edit permission to update an active employee record, subject to re-approval for statutory fields (e.g., CNIC, Date of Birth).	Low

6. Data Requirements – Employee Registration Data Dictionary

The following data dictionary defines every field captured during Employee Registration, including data type, size, mandatory status, and validation rule. This is the authoritative field-level specification for both application and test data design.

6.1 Personal Information

Field	Type	Size	Mand.	Validation Rule	Sample Value
Employee ID	Auto (System)	12	Yes	Auto-generated on save; format EMP-YYYY-NNNNN; read-only	EMP-2026-00147
Full Name	Text	100	Yes	Alphabets and spaces only; min 3 characters	Ayesha Khan
Date of Birth	Date	10	Yes	Must result in age between 18 and 60 years at registration date	14-Mar-1996
Gender	Dropdown	–	Yes	One of: Male / Female / Other	Female
CNIC / National ID	Text (Numeric)	13/15	Yes	Exactly 13 digits (unformatted) or valid passport no.; unique across system	3520112345671
Marital Status	Dropdown	–	No	One of: Single / Married / Divorced / Widowed	Single
Nationality	Dropdown	60	Yes	Selected from country master list	Pakistani
Photograph	File Upload	5 MB	No	JPG/PNG only; recommended 300x300 px	photo.jpg

6.2 Contact Information

Field	Type	Size	Mand.	Validation Rule	Sample Value
Mobile Number	Text (Numeric)	15	Yes	Valid format e.g. +92-3XX-XXXXXXX; unique per employee	+92-301-2345678
Personal Email	Email	100	Yes	Valid email format; unique across system	ayesha.khan@example.com
Current Address	Text (multiline)	250	Yes	Free text; must include city	House 12, Street 5, Rawalpindi
Permanent Address	Text (multiline)	250	No	Free text; defaults to current address if same	Same as current
Emergency Contact Name	Text	100	Yes	Alphabets and spaces only	Ali Khan
Emergency Contact Number	Text (Numeric)	15	Yes	Valid phone format; must differ from employee's own number	+92-333-1122334

6.3 Job / Employment Information

Field	Type	Size	Mand.	Validation Rule	Sample Value
Department	Dropdown	–	Yes	Selected from active Department master	Finance
Designation	Dropdown	–	Yes	Selected from active Designation master; filtered by Department	Accounts Officer
Branch / Location	Dropdown	–	Yes	Selected from active Location master	Head Office – Rawalpindi
Employment Type	Dropdown	–	Yes	One of: Permanent / Contract / Probation / Internship	Probation
Date of Joining	Date	10	Yes	Cannot be a past date beyond 30 days or a future date beyond 90 days	01-Aug-2026
Reporting Manager	Dropdown (search)	–	Yes	Must be an existing Active employee record	Bilal Ahmed (EMP-2021-00032)
Employment Status	System-Set	–	Yes	Default 'Pending Approval'; system-controlled thereafter	Pending Approval
Probation Period (months)	Numeric	2	No	Integer 0–12; required if Employment Type = Probation	3

6.4 Statutory & Banking Information

Field	Type	Size	Mand.	Validation Rule	Sample Value
Tax Registration No. (NTN)	Text	15	No	Alphanumeric; validated against tax-authority format	1234567-8
Bank Name	Dropdown	–	Yes	Selected from bank master list	HBL
Bank Account / IBAN	Text	24	Yes	Valid IBAN checksum for the selected bank	PK36HABB0000123456789012
Provident Fund No.	Text	20	No	Auto-issued after approval; read-only	PF-2026-00147

7. Business Rules

Rule ID	Business Rule
BR-01	An employee record cannot be marked 'Active' until it has been approved by an HR Manager.
BR-02	CNIC/National ID and Personal Email must be unique across all employee records, including inactive/terminated ones.
BR-03	Date of Joining cannot fall on a company-declared holiday or weekend as defined in the Holiday Calendar master.
BR-04	If Employment Type is 'Probation', Probation Period is mandatory and the system shall auto-schedule a confirmation review reminder.
BR-05	A Reporting Manager cannot be the same person as the employee being registered.
BR-06	Rejected registrations must include a mandatory rejection reason and are returned to 'Draft' status for correction, not deleted.
BR-07	Only users with the 'HR Manager' role can approve or reject a submitted registration.
BR-08	All personal and statutory data changes on an already-Active record require re-approval before taking effect.

8. Process Flow – Employee Registration

- HR Executive logs in and selects 'Register New Employee'.
- HR Executive completes Personal, Contact, Job, and Statutory sections; uploads required documents.
- System performs field-level and duplicate validation on submission.
- On successful validation, the record status is set to 'Pending Approval' and Employee ID is generated.
- HR Manager receives a notification, reviews the record, and either Approves or Rejects it.
- If Approved: record status becomes 'Active'; downstream Payroll/Attendance modules are notified.
- If Rejected: record returns to 'Draft' with the reason visible to the HR Executive for correction and resubmission.

9. Non-Functional Requirements

Category	Requirement
Performance	The registration form shall save a record in under 3 seconds under normal load (up to 100 concurrent users).
Usability	The form shall be organized into clearly labeled sections (Personal, Contact, Job, Statutory) with inline validation messages.
Security	All personal data (CNIC, bank details) shall be encrypted at rest and in transit; access restricted by role-based permissions.
Auditability	Every create, edit, approve, and reject action shall be logged with user ID and timestamp, retained for a minimum of 7 years.
Availability	The module shall be available 99.5% of the time during business hours (9 AM – 6 PM, Mon–Fri).
Compliance	Data handling shall comply with the organization's data-privacy policy and applicable local labor/data-protection law.
Scalability	The module shall support up to 50,000 employee records without degradation in search/view performance.

10. Acceptance Criteria

- A registration cannot be submitted while any mandatory field (Section 6) is empty or invalid.
- Submitting a CNIC or email that already exists in the system displays a duplicate error and blocks save.
- A successfully submitted record receives a unique, system-generated Employee ID in the format EMP-YYYY-NNNNN.
- A record's status is 'Active' only after explicit HR Manager approval; otherwise it remains 'Pending Approval', 'Draft', or 'Rejected'.
- Rejecting a record without entering a reason is blocked by the system.
- All status-change actions generate a notification and an audit-log entry.

11. Risks & Mitigations

ID	Risk	Mitigation	Impact
R-01	Duplicate employee records due to inconsistent CNIC formatting (spaces/dashes).	Normalize CNIC input (strip formatting) before duplicate-check comparison.	Medium
R-02	Delay in onboarding if approval step is not completed promptly by HR Manager.	Configure automatic reminder notifications after 24 hours of pending approval.	Medium
R-03	Sensitive personal data exposure through unsecured document uploads.	Enforce encrypted storage and access-controlled document retrieval.	High
R-04	Incorrect Reporting Manager assignment due to stale employee master list.	Restrict Reporting Manager dropdown to 'Active' status employees only, refreshed in real time.	Low

12. Glossary

Term	Definition
BRD	Business Requirements Document
HRM	Human Resource Management
CNIC	Computerized National Identity Card (national ID number)
IBAN	International Bank Account Number
UAT	User Acceptance Testing
NTN	National Tax Number

13. Approval & Sign-off

By signing below, the stakeholders confirm that this Business Requirements Document accurately reflects the business needs for the HRM Employee Registration function and approve it as the baseline for design, development, and test-case creation.
